

1. Right click on the website. Click on Inspect

2. A new panel on the right pops up. Click on the symbol circled on the picture below.

3. Move your cursor onto the object you want to scrape on the website. You will realize that the panel will show the class name of that object. Use that class name to scrape your data by copy and pasting in the code. For instance, for the example below, you can see for the titles, the class name is "entry-title".

The image shows a browser window with the website 'RECHTSPRAAK SURINAME'. The page title is 'VOOR: CARIBISCH HOF VAN'. The main content area displays 'GEDRAGSCODE RECHTERS' in blue text. Below this, there is a paragraph of text starting with '...van Justitie, de gedragscode van het Gemeenschappelijk Hof van Justitie' and a link 'Lees verder >'. The browser's developer tools are open, showing the HTML structure. A red arrow points from the text 'GEDRAGSCODE RECHTERS' in the browser to the corresponding HTML element in the developer tools, which has the class name 'entry-title'.

```
...<div class="post-2843 page type-page status-publish entry" id="post-2843">
  <header class="entry-header">
    <h2 class="entry-title">
      <a href="https://rechtspraak.sr/home/protocolles/gedragscode-rechters/" rel="bookmark">Gedragscode rechters/</a>
    </h2>
  </header>
  <div class="entry-content">
    <p>...van Justitie, de gedragscode van het Gemeenschappelijk Hof van Justitie alsook de NVvR[7]-Rechtscodes. [8] Zie artikel 12 van de Wet op de Inrichting en Samenstelling van de Rechterlijke Macht. [9]...</p>
  </div>
  <a href="#">Lees verder ></a>
</div>
```
